

Running a Basic Terminal Output Test

Overview

This guide demonstrates how to execute a simple text command in Windows PowerShell to verify basic console output functionality.

Step 1: Print Test String [EXECUTION]

Pass arguments to the **echo** command to print a test message to the standard output and confirm shell responsiveness.

```
echo Gemini test
```

Expected output:

```
Gemini  
test
```

Result

The test string was successfully evaluated and printed to the terminal console.
