

FlowScope Repository Environment and Git Status Check

Overview

This guide documents a terminal session where the user verified shell responsiveness, inspected the working directory contents of the FlowScope project, checked the Git branch and status, and ended the terminal session.

Step 1: Test Terminal Echo [SETUP]

Verify shell responsiveness by echoing a basic text string.

```
echo hi

hi
```

Step 2: List Directory Contents [VERIFICATION]

Display the files and subdirectories present in the **FlowScope** project directory to review project assets.

```
ls

Directory: C:\Users\gynar\OneDrive\Desktop\FlowScope

Mode LastWriteTime Length Name
----
d----- 14-09-2026 10:55 flowscope-ui
d----- 14-09-2026 10:51 prj
d----- 16-09-2026 09:33 sessions

-a---- 15-09-2026 12:37 14596 flowscope_pdf.py
-a---- 14-09-2026 10:54 88 package-lock.json
```

```
-a---- 15-09-2026 00:46 12613 README.md
-a---- 15-09-2026 09:56 715 requirements.txt
```

Step 3: Check Git Branch [VERIFICATION]

Determine the current active Git branch.

```
git branch
```

```
* main
```

Step 4: Check Working Directory Git Status [VERIFICATION]

Inspect local modifications and untracked files in the repository.

```
git status
```

```
On branch main
Your branch is ahead of 'origin/main' by 1 commit.
  (use "git push" to publish your local commits)

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
modified: flowscope.py
modified: flowscope_curator.py
modified: flowscope_parser.py

Untracked files:
  (use "git add <file>..." to include in what will be committed)
sessions/2026-09-16/Parser-Test-10/
sessions/2026-09-16/Parser-Test-11/
sessions/2026-09-16/Parser-Test-6/
sessions/2026-09-16/Parser-Test-8/
sessions/2026-09-16/Parser-Test-9/
sessions/2026-09-16/Test-11/

no changes added to commit (use "git add" and/or "git commit -a")
```

Step 5: Execute User Identity Check [VERIFICATION]

Attempt to run a command to verify user identity. The command contained a typographical error (**whoam** instead of **whoami**) and failed.

```
whoam
```

```
whoam : The term 'whoam' is not recognized as the name of a cmdlet, function, script file, or operable
program. Check the spelling of the name, or if a path
was included, verify that the path is correct and try again.
At line:1 char:1
+ whoam
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (whoam:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException
```

Step 6: Terminate Terminal Session [CLEANUP]

Close the active PowerShell session.

```
exit
```

Result

The working environment for FlowScope was inspected. The repository was confirmed to be on the **main** branch with 3 modified core source files (**flowscope.py**, **flowscope_curator.py**, **flowscope_parser.py**) and multiple untracked session folders.
