
Checking Git Repository Status

Overview

This guide demonstrates how to check the active Git branch and inspect the current status of the working directory, including modified and untracked files.

Prerequisites

- ◆ A working directory initialized as a Git repository.

Step 1: Verify the Active Branch [VERIFICATION]

List local branches and identify which branch is currently checked out.

```
git branch
```

```
* main
```

Step 2: Inspect Working Directory Status [VERIFICATION]

Check the state of the working tree to view untracked files, modified files, and staged changes.

```
git status
```

```
On branch main
Your branch is up to date with 'origin/main'.
```

```
Changes not staged for commit:
```

```
■modified:   flowscope.py
```

```
Untracked files:
```

```
■flowscope_debug.py
```

```
■sessions/
```

Result

You have successfully verified that you are on the **main** branch and identified all modified and untracked files within the repository.
