
Checking Git Repository Status and Active Branch

Overview

This guide explains how to inspect the working tree status and verify the active branch within a Git repository.

Step 1: Check Working Tree Status [VERIFICATION]

Display the state of the working directory and staging area to identify modified, staged, or untracked files.

```
git status
```

```
On branch main
Changes not staged for commit:
  modified:   flowscope.py

Untracked files:
  flowscope_debug.py
  sessions/
```

Step 2: Verify Active Branch [VERIFICATION]

List local branches and highlight the currently active branch.

```
git branch
```

```
* main
```

Result

The current repository status was inspected, showing modified and untracked files while confirming the active working branch is **main**.
